

Introduction

In Business Central, Cues allow users to get important headline information and fast access to the underlying data, either from a role centre, or from a fact box. However, to have non-standard cues would typically involve development work, which takes time and money.

Dynamics Cues is a tool that allows you to create your own cues in Business Central, without the need for coding

Features

Dynamic Cues is a Business Central enhancement that allows you to turn raw data into actionable insights-right from your Role Centre or page FactBoxes. Fully customizable and lightning-fast to deploy.

✓ Key Benefits

Zero Code, Full Power:

Create custom cues in minutes with clicks, not code.

Tailored to Roles:

Show panels based on user roles or individuals; perfect for Sales, Finance, Ops, or Service teams.

Real-Time Insights:

Live cues update as often as every minute for constant visibility into key metrics.

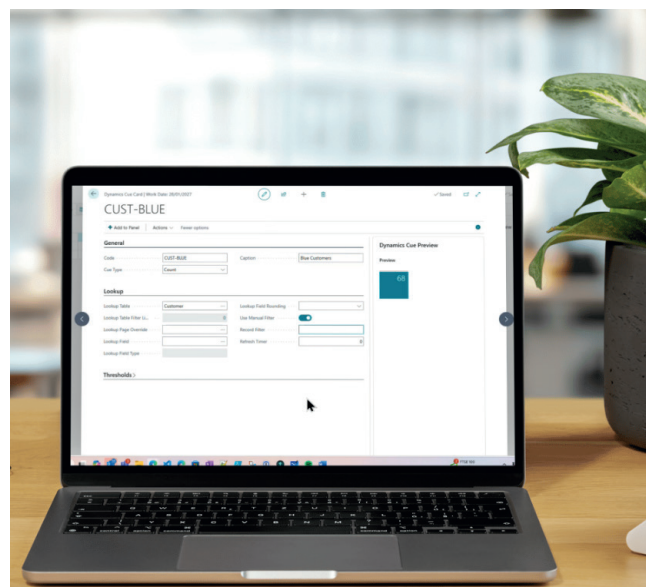

Action-Driven:

Run reports, launch URLs, or drill directly into filtered data from your dashboard.

Creating Cues

Either by using the Dynamics Cues creation interface. Or by creating filtered views and saving them as cues.

- The Dynamics Cues interface as part of Business Central, allows you to easily set up which data, filters and links that you would like to set up for your cue. This is easy and user friendly, non-technical users can create cues with ease.
- Alternatively, you can create a cue from any custom view. Setup the view that you want, and use the Dynamics Cues factbox to create a cue.
- Irrespective of how you create your cue, it is easy to go into the cue list, and modify your existing cues.

Not Just Filtered Views

The cues that you make through Dynamics Cues are not limited to filtered views. There is a wide range of extra functionality that will really make your role centre come to life:

Other Features

Traffic Lights:

Often known as "traffic lights"! the standard Business Central functionality of applying limits and associating them to coloured identifiers allows you to get a fast overview of the health of your business.

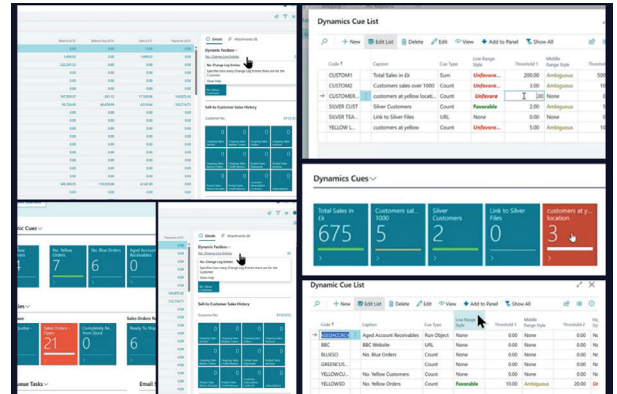

External Links:

Link to any URL, whether that is within Business Central, to a website on your system eg a teams site, or any useful website from the internet.

Actions:

Run object will allow you to run a report straight from the cue.

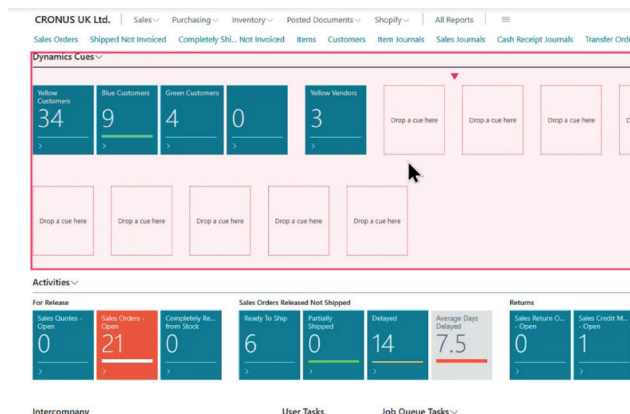

Showing Your Cues

Cues are displayed by adding them to panels. Panels can be controlled according to users or by role. Simply add cues to one or more panels, and manage the order in the panel setup.

Panels will also be shown on pages via the Dynamics Cues fact box. This is controlled by the table associated to the panel.

Users can also customise the layout of the cues in the Role Centre, as per normal layout customisation.

Why Choose Dynamic Cues?

Auto-refreshing metrics

Fully filterable

12 cues per panel / 12 panels per Role Centre

Modular design, fast rollout

Dynamics Apps is a suite of extensions by Dynamics Consultants that enhance Microsoft Dynamics® 365 Business Central. Designed to streamline processes, boost productivity, and add useful functionality, these apps integrate seamlessly as part of the system. With Dynamics Apps, Business Central gains improved functionality and becomes easier to use, making you, your users and your business more efficient.

Contact Dynamics Consultants to discuss how Dynamics Cues, and the rest of the Dynamics Apps suite can help you.**

**Included for free as part of the Dynamics Consultants Support Contract package.
